trisodium salt

Other information

There is insufficient scientific evidence for classifying hydroquinone as a suspected carcinogenic or mutagenic substance in humans. Epidemiologic studies over a period of 48 years, wherein -during manufacturing and use of hydroquinone- more than 800 human individuals were daily exposed at significant airborne concentrations (greater than the MEL of 0.5 mg/m³), demonstrated that such exposure is not associated with the induction of cancer in humans.
Hazard labelling of this preparation: see section 15.

12. ECOLOGICAL INFORMATION

Elimination information (persistence and degradability)

Biodegradation

- Hydroquinone : OECD 301D Assessment of biological degradability
> 80 % after 28 d
